

QUANTEC GMBH

# WHAT'S NEW ABOUT QUANTEC® 6.0 R2?

## Overview of the new features

- The new Send Wizard
- Automated creation of collages with up to 16 images
- Creation of collages from PDF documents with up to 16 pages
- The new sorting capabilities in the HealingSheet
- The new PREMIUM transmitter station

## The new Send Wizard

The send schedules created up to this version of QUANTEC® specify the **interval and sending**, sometimes **for long periods**. QUANTEC® can in this case not handle daily requirement fluctuations, but only find the best possible average value for these periods.

**But what if** QUANTEC® always specified only one sending time

and only then determined when and for how long QUANTEC® should carry out the next treatment? The treatments would then take place **much more in line** with requirements. On some days, more treatments could be required than on other days. QUANTEC® could then adjust itself much better to the **needs of the target object**.

The new Send Wizard with the automatic Send Schedule does exactly that. The user or the diode specify only the end date\* of the treatment, and QUANTEC® then handles the rest **in real time**.

**Another new feature** is that now, several send schedules can be created for a HealingSheet. Manual sendings can also be programmed in the future, and then do not need to be manually triggered as in the past.

## Automated creation of collages with up to 16 images

**What to do if** you want to treat a target object which is to be defined with more than two images? A family for example, or a company?

Previously this could only be solved with external image-processing Software, and the collage created in this way then read into QUANTEC® as a single

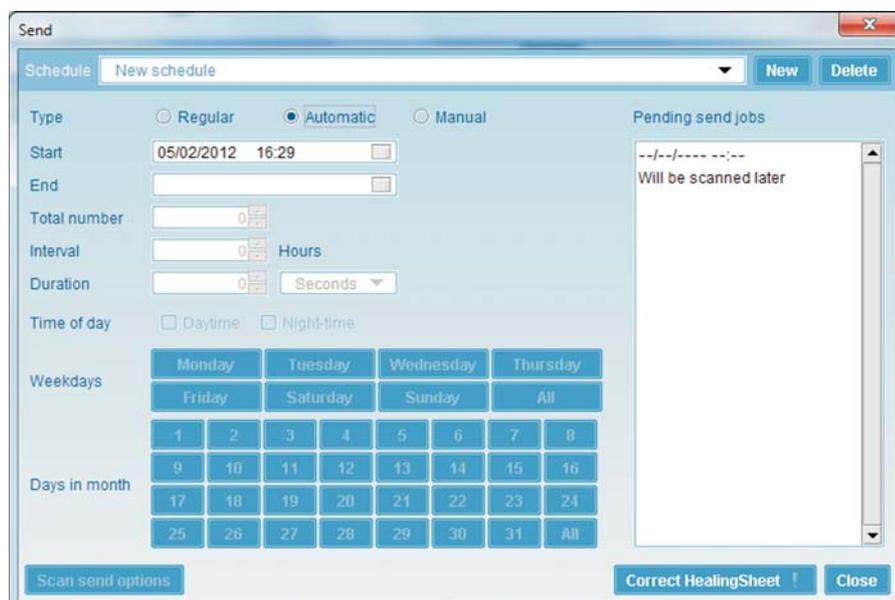

image. Now, QUANTEC® performs this task for you: Right-clicking on any image frame opens the familiar menu, but now with two extensions; in this case “Create collage...”.

1| New function: Create collage ...

With 16 images, the space is naturally somewhat restricted; nevertheless the individual images are still clearly recognisable and also provide QUANTEC® with **sufficient data for a clear target identification. Complex target objects** can therefore be

entered quickly and easily.

### Creating images with up to 16 pages from PDF documents

In the same way, PDF documents can also be read directly into QUANTEC®. You only have to allow QUANTEC® to upload the PDF file, and you can then select files with any number of pages up to 16 and use them in a collage.

Figure 3 shows as an example 9 pages of a HealingSheet. You can see that despite the very small size, the characteristic details of every page are still clearly recognisable.

You can therefore **easily make** use of information saved as a PDF.

### The new sorting capabilities in the HealingSheet

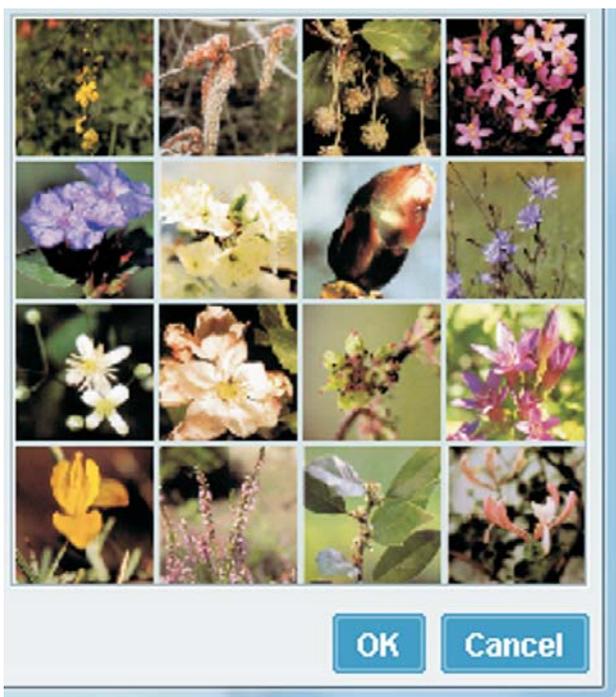

The possibilities for sorting entries in HealingSheets have so

3| New function: Create from PDF ...

far been very limited (see Figure 4, green frame at bottom right). Once applied, a sorting procedure could also not be reset.

The new feature is that when clicking on the button [Sort], a window now opens in which sorting can be applied in ascending or descending order according to various parameters.

2| Create a collage with only a few clicks, this is now possible with the new QUANTEC® 6.0 R2

4| New sorting capabilities of the HealingSheet entries in the new QUANTEC® 6.0 R2

As long as [Sort tentatively] is selected (see Figure 4, red frame at top left), the user can always return to the original sorting. The original sorting is only overwritten when the new sorting is saved.

### The new PREMIUM transmitter station

The new feature of the PREMIUM Transmitter station is quickly explained: This transmitter station no longer requires the **import of the send schedules**, but takes them **automatically** from the workstation.

**Up to 6 transmitter stations** can now handle the send operations of a workstation. The transmitter stations need only to be connected by a network cable, **without the need for establishment of a network**.

If you **do not want to have the transmitter stations in the same room**, the QUANTEC® transmitter stations can also exchange the required data over the power

cables in your home or practice. If you would like to find out more, please give us a call, we will be happy to advise you.

### Further improvements

#### Extension of HealingSheets

When extending HealingSheets in the screen “Expiring HS”, you can specify whether the new send options are to be scanned. This function is selected as standard.

#### The Butler creates additional HealingSheets

If the Butler recommends the creation of an additional Healing-Sheet, he creates it himself automatically on request.

#### Optimisations in the background

Once again, we have optimised several background functions in order to improve the performance of your software.
